# KAEM GROUP - TERRITORIAL RANGE

Our goal is to constantly develop and use all challenges associated with it. We do not limit ourselves to the sale of painting and building tools and accessories just to Poland, but we are consequently enlarging our presence in European markets.

Company Kaem every year take part in the largest international construction fairs. Our products have aroused great interest at the trade fair in Moscow, Kiev, and Cologne.

Eisenwaren Messe, Cologne, Germany

InterBudExpo, Kiev, Ukraine

Mosbuild, Moscow, Russian Federation

# OUR BRANDS

We stock a wide range of tools for painting (brushes and rollers), wallpapering (chalk lines, cutters and tighten rollers), surface preparation (plastering — masonry accessories), tiling (cutters, spreaders and nips).

Also a comprehensive range of tapes for many different applications used during: house renovation, in the house, garden and office.

Abrasive materials and accessories: scrapers, wire or brass brushes, trowels for polishing up, abrasive blocks and chocks, abrasive papers, linens, meshes and disks and sponges for polishing up.

# Velour self adhesive decorations

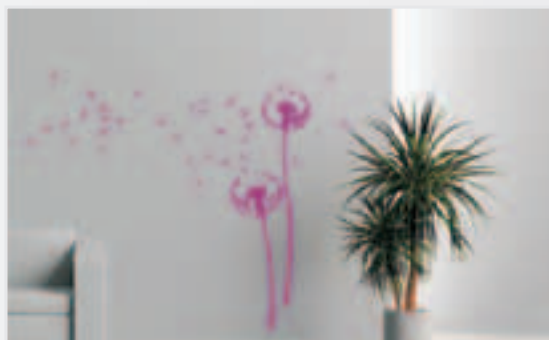

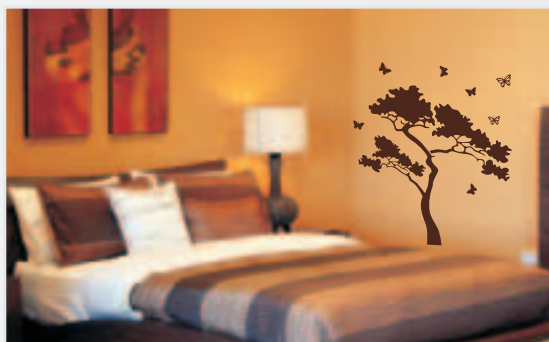

Velour self adhesive decorations are made of a flexible, but high quality soft material.

This original finishing element gives individual character to the interior.

Moreover, it enables users to cover wall defects. There is an option to combine a few stencils or colour variants to create an arrangement fitted to an individual interior. Assembly is quick and easy — just apply the stencil from a transport foil onto the surface. They can be used on different surfaces such as: walls finished with paint or wallpaper, furniture, mirrors, windows, fridges etc. It does not destroy the surface — a carefully removed sticker can be reused.

**Please see available stencils in different colour variants. See VeldyDeco catalogue for more details.**

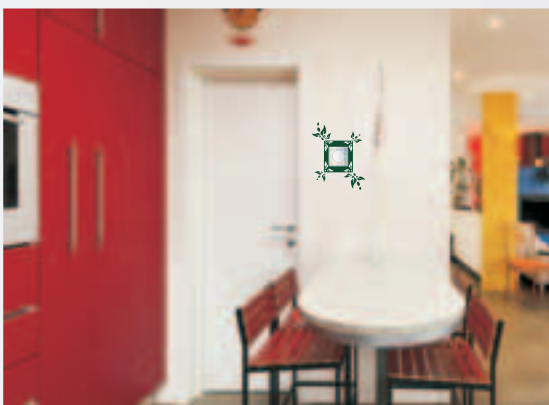

18 x 55 cm	1/ - / -	<b>1186-xx xx xx</b>
47 x 97 cm	1/ - / -	<b>1187-xx xx xx</b>
57 x 80 cm	1/ - / -	<b>1188-xx xx xx</b>

Our collection also includes stencils in the form of socket covers. In addition to decorating, they also protect walls from getting dirty. They are also available in child friendly designs, perfect for children's rooms.

**Stencils are available in many different colour variants, so please check our special catalogue of socket covers — VeldyDeco.**

# PAINTBRUSHES

Material description	Material properties	Application
<b>CHINESE BRISTLE</b> Natural bristle from pigs farmed in China. Normally coloured black or gray, is the most common material used for production of paintbrushes and ceiling paintbrushes.	Bristles have a scaled rough surface and are normally slightly bent and conical. In contrast to hair, bristle brushes have two to three ends forming so a called flag effect that provides a more complete and smooth surface covering. This guarantees that paint is applied to the adequate paint gradient.	Properties of Chinese bristle make it in particular suitable for work with solvent based paints and lacquers.
<b>POLYESTER</b> Synthetic polyester fibres have special properties that prove to be perfect in regard to absorption of paint and draining it off the surface.	Due to reduced water absorption, polyester brushes do not swell when they are used with water based lacquers and are also quicker and easier to clean.	Ideal for work with water based paints and lacquers as well as glazes and wood protection coatings.
<b>DUHALON / SILVERPREN</b> Specially developed synthetic bristles, resistant to solvents and priming measures.		Suitable for work with materials based on strong solvents and with priming measures.
<b>BRISTLE HORSEHAIR</b> Mostly, stronger tail hair and more delicate mane hair is used.	Bristle horsehair is considerably cylindrical and does not have a natural spike.	Treated and trimmed bristle is used for production of high quality wallpapering brushes and ceiling paintbrushes.
<b>FIBRA</b> A natural plant fibre from leaves of a tropical plant called Agave.		Used for applying bituminous and lime coatings.

# SELF-ADHESIVE TAPES

## Surface preparation

Before applying tape, it is recommended to prepare the surface – the surface should be dry, clean and oil free. Porous surfaces such as, loose plaster or flaking paint coats require preparation such as priming with a suitable primer.

## Application

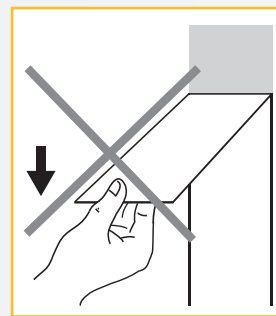

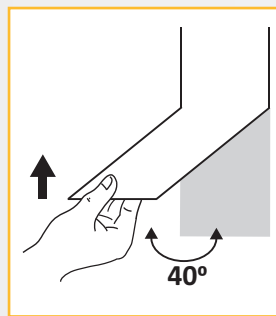

It is very important to not to touch the adhesive part of the tape during its application. The tape will not unglue from the surface, if immediately after an application, it is pressed with a soft cloth. Avoid using tape on natural stones. It is always recommended to make a trial application, regardless of the tape and surface type. In case of double-sided tapes, a surface type plays a crucial role – rough and porous surfaces have a low adhesive qualities. Adhesive tapes should be used at temperature no lower than room temperature.

## Removal

To obtain the optimal effect of straight and clean edges, it is important to remove the tape directly after painting is finished, and before the paint dries completely. All tapes shall be removed slowly, from the side of the painted surface – avoid rapid movements and remove at an angle of about 40 degrees. Please pay attention to the maximum application time inside and outside rooms.

Because wood is a very difficult and demanding surface, before first use, make a trial tape application. To avoid tearing off wood fibres during tape removal, the removal of tape should be done slowly, carefully and with no rapid movements.

### Tape removal

All data and hints are presented in goodwill, and were prepared based on our knowledge and experience. The manufacturer gives a warranty for the products. However, diverse working conditions and surface type may affect a final effect of using these products. Before starting a proper job, we suggest doing a trial application. All tapes are subject to constant control, based on database and technical specifications.

### Description of symbols used on labels:

Maximum application time of the tape inside and outside rooms

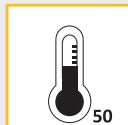

Smooth edges after painting

Gluing force

Corrugated surface – easy breaking

Resistance to temperature

Water resistance

Two adhesive sides with a paper spacer

Flexibility, for arcs

### TERMO-CUT 1120

Professional electric device used for cutting styrofoam panels. It is produced in Germany from components of the highest quality. Its universal functionality means it can be used as a lying device, or as a hanging device (if an additional assembly holder for scaffolding is used). Alternatively, it can be used as a standalone device with assembled feet.

Cutting length 110 cm, depth (thickness) 24 cm.

Cutting: longitudinal, lateral, oblique, bevel, overlaid, deep seated etc.

1/ - / -	<b>2480-11 20 00</b>
----------	----------------------

Module	Max. working height [m]	Max. height of working platform [m]	Scaffold height [m]	Weight [kg]
1	2.80	1.00	1.80	36
1+2	3.80	1.75	2.80	52

#### Module 1

Height: 1.80 m

#### Module 1+2

Height: 2.80 m

**Module 1**

Height: 2.7 m

**Professional aluminium mobile scaffolding  
TOP-SYSTEM**

0.75 m x 1.80 m, maximum load 280 kg

Module 1	1/ - / -	<b>1780-76 03 40</b>
Module 2	1/ - / -	<b>1780-76 04 40</b>
Module 3	1/ - / -	<b>1780-76 05 40</b>
Module 4	1/ - / -	<b>1780-76 06 40</b>
Module 5	1/ - / -	<b>1780-76 07 40</b>

Module	Max. working height [m]	Max. height of working platform <sup>2</sup> [m]	Scaffold height <sup>1</sup> [m]	Weight [kg]
1	3.7	1.7	2.7	75.9
1+2	4.8	2.8	3.8	92.5
1+2+3	5.9	3.9	4.9	119.8
1+2+3+4	7.1	5.1	6.0	131.5
1+2+3+4+5	8.2	6.2	7.2	171.5

**Module 1+2**

Height: 3.8 m

**Module 1+2+3+4**

Height: 6.0 m

**Module 1+2+3+4+5**

Height: 7.2 m

**Module 1+2+3**

Height: 4.9 m

On request, there is an option to extend the scaffolding with additional modules, each of 1 m, up to maximum working height of 13.40 m

<sup>1</sup> Maximum height of scaffolding (with wheels screwed up)

<sup>2</sup> Maximum height of working platform (with wheels twisted down)
